PROFILE SUMMARY

Motivated Python Developer with a B.Tech in Computer Science and Engineering, skilled in Python, HTML, CSS, and Bootstrap. Experienced in developing scalable web applications, REST APIs, and integrating databases with a focus on clean, efficient code. Passionate about continuous learning and building reliable software solutions in collaborative environments.

SKILLS

Technical Skills

- Programming Languages: Python, Java
- Web & API Development: HTML, CSS, Django, Django REST Framework, Bootstrap, React
- Data Handling: MySQL
- AI Tools: ChatGPT, Gemini AI, Claude AI, Copilot, Bolt AI.
- Tools & Platforms: Git, GitHub, Postman, Thunder Client, Jupyter Notebook, Visual Studio Code

Language: Malayalam (Native), English (Fluent), German (Basics)

EXPERIENCE

Python Full Stack Developer Intern

Nov 2025 – May 2026

Luminar Technolab, Trivandrum

- Working as a Python Full Stack Developer intern for 6 months, gaining hands-on experience in both frontend and backend development.
- Developing and maintaining dynamic web applications using Python, Django, HTML, CSS, JavaScript, and MySQL.
- Collaborated in an agile environment to design RESTful APIs and integrate them with user interfaces.
- Improved application performance and implemented responsive UI components to enhance user experience.

Python Django Developer Intern

June 2026 – Present

Geosys IT Solutions Pvt Ltd, Trivandrum

- Working as a Django Developer intern for 3 months, gaining hands-on experience in both frontend and backend development.
- Developing and maintaining dynamic web applications using Python, Django, HTML, CSS, JavaScript, and MySQL.
- Improved application performance and implemented responsive UI components to enhance user experience.
- Developing a Django-based web application that processes Excel datasets and generates automated PDF reports.
- Implementing Excel file upload and validation workflows using Python and Django.
- Transforming tabular data into structured PDF reports.
- Generating visual analytics and charts from uploaded Excel data to improve data interpretation.

PROJECTS

Campus Store – Campus E-Commerce Platform (Django Project)

- Developed a full-stack campus-exclusive e-commerce web application using Python and Django, enabling college students to browse, wishlist, and purchase verified second-hand campus products online.
- Designed responsive and user-friendly interfaces using HTML, CSS, Bootstrap, JavaScript for a seamless shopping experience across all devices.
- Implemented secure user authentication with role-based access control, differentiating between Admin and User roles for managing products, orders, and platform operations.
- Built complete order management system including cart, wishlist, checkout, COD and online payment support, and with payment status.
- Integrated Gmail SMTP for transactional emails including password reset, order confirmations, and customer support contact form submissions.
- Implemented geolocation-based user location detection and dynamic category filtering to enhance product discovery on the home page.
- Integrated MySQL database for efficient storage and retrieval of user data, product listings, orders, delivery addresses, wishlist, and payment records.

Food Ordering Website (Django Project)

- Developed a full-stack food ordering web application using Python and Django, enabling users to browse menus, place orders, and manage accounts.
- Designed responsive and user-friendly interfaces using HTML, CSS, and Bootstrap for seamless experience across devices.
- Implemented backend logic for user authentication, order management, and dynamic content rendering.
- Integrated MySQL database for efficient storage and retrieval of user data, orders, and menu details.
- Used MVC (Model-View-Template) architecture of Django to maintain clean and scalable code structure.

RAG-based AI Chatbot.

- Designed and developed a Retrieval-Augmented Generation chatbot backend to answer domain-specific queries efficiently.
- Implemented vector database retrieval and optimized context handling for accurate response generation.
